

Your power to choose

Highland Walloon is a Natural Gas Estate, giving homeowners the freedom to select the energy sources and appliances that perfectly fit their needs when designing their dream home.

Depending on the natural gas appliances you select, some solar may be required to meet the new 7 star building code. Talk to your builder for tailored advice.

Continuous flow hot water

Cold showers are a thing of the past with a continuous flow hot water system. And since hot water accounts for up to a third of home energy bills, heating water only when it's needed is also highly efficient.

Instant warmth, even heat

Discover instant warmth on demand and guaranteed comfort on even the coldest of days with a natural gas heater. Create a cosy focal point with the charm of a gas log fire.

A better BBQ experience

Install a fitted gas line to your BBQ and forget about changing gas bottles. Experience the convenience and ease of uninterrupted cooking!

Precise temperature control

You can rely on natural gas to cook up a storm, even when the power fails. Natural gas offers instant heat, and large burners can deliver fast, authentic results for stir-fries and grilling meat.

Less time in the laundry

If you have a busy lifestyle or limited space for a clothesline, you can rely on a natural gas clothes dryer to dry your laundry fast - and significantly reduce your ironing time too.

Radiant patio heaters

Install a fitted gas line to patio heaters to create a cosy atmosphere in the cooler months, and enjoy your outdoor entertaining spaces year-round.

Choosing natural gas for your new home

Highland Walloon provides access to natural gas on every block, making it easy to connect your new home. Just follow these four simple steps to get started. For extra help or advice, contact APA on 1300 001 001.

Step 1

Choose your gas appliances

Let your builder know which gas appliances you'd like to include. This helps determine the right gas meter size and energy allowance for the new 7 star building code.

Step 2

Request gas for your property

Your builder will usually handle the gas connection. If you're an owner-builder, contact APA on 1300 001 001 to request a gas service line. We recommend you provide 3 to 6 months' notice to allow for Council permits and installation.

Step 3

Choose an Energy Retailer

As your build nears completion, contact your preferred Energy Retailer to arrange a gas meter and open a gas billing account. If your builder has already arranged the meter, you'll just need to transfer the account into your name.

Step 4

Get Connected

Your builder will engage a licensed gas fitter to connect your appliances to the meter. Everything will be ready for you to enjoy natural gas from day one in your new home.
